Everything you need,
right **WHERE** you need it

Hose Control Assemblies

With Houston Vibrator's hose control assembly, easy control is right at your fingertips. It's an easy and efficient solution to keep pneumatic railcar vibrators and form vibrators running properly. No more running from the vibrator to a control panel, turn your vibrator on or off right where it's used, and check the lubricant level while you're running.

Two configurations are available, to connect to either a threaded NPT port, or a male hose barb.

Standard features & benefits

- Crow's foot connector quickly connects to your air source
- In-Line lever valve allows quick on/off control of the vibrator
- Heavy-duty In-Line lubricator continually lubricates
- Large sight glass in the lubricator allows a quick visual check of lubricant level every time you use the vibrator

Suitable for use with these models:

- HCV Series Railcar Vibrators
- QMC Series Railcar Vibrators
- CLR Series Railcar Vibrators
- CLR Series Form Vibrators
- FBR Series Form Vibrators

Houston Vibrator also carries these components:

- Custom Air Hoses
- Air Filters
- Air Regulators
- Air Lubricators
- Valves
- Timers
- Mounting Assemblies
- Vibrator Repair Kits
- Specialized Lubricants

Contact the Houston Vibrator sales team for assistance in choosing the vibrator, mounting options, and control components that will work best in your facility.
