

Single Phase Speed Control

Adjust vibration
frequency with the
turn of a dial

FC-40 Plus Single Phase Speed Control

The FC-40 Plus is ideal in applications that require the ability to fine tune vibration speed while running. This simple speed control can be used with our AMV Series models, as well as SPV AM Series models. Simply plug the vibrator into the speed control, plug the speed control into a standard 120 Volt wall outlet, and you're ready to go.

Standard features & benefits

- Nema-1 general purpose enclosure
- 120VAC input voltage, 50/60 Hz, 15 amps or 30 amps
- UL and cUL listed (file E183233)
- Provides a soft-start adjustment so that equipment can cycle on gently
- Output is switch selectable from 120 pulses per second to 60 pulses per second
- Maximum output power level can be preset
